

Gaurav Dhingra

Senior QA Engineer / SDET — Backend, API & UI Automation

grvdhingra1999@gmail.com — +91 9899605005 — Delhi / NCR — GitHub — LinkedIn

SUMMARY

Senior QA Engineer / SDET with 4.5+ years of experience owning backend test infrastructure and quality engineering for mission-critical FinTech platforms used by the world's largest enterprises and central banks. Deep hands-on expertise in validating complex financial workflows spanning payments, treasury, cash management, liquidity, settlements, and multi-asset instruments, with strong working knowledge of SWIFT MT/MX, ISO 20022, CBPR+, and SEPA. Advocates shift-left practices, integrating testing early and continuously into CI pipelines. Proven ability to design and scale BDD-driven automation frameworks for distributed, asynchronous systems while driving platform reliability through resiliency and performance engineering in regulated financial environments.

CORE SKILLS

Languages: Java, Python, JavaScript

Test Automation: Robot Framework, BDD, Cucumber, TestNG, JUnit, Pytest, Selenium WebDriver, Appium, Playwright, Page Object Model, Pact

CI/CD & Tooling: Jenkins, Git, Linux, Shell Scripting, Postman, Maven, Docker, Kubernetes, Jira

Backend & API: REST APIs, RestAssured, Kafka, microservices, asynchronous & event-driven systems

Performance & Reliability: JMeter, load testing, resiliency & recovery testing, APM analysis

Payments & Messaging: SWIFT MT/MX, ISO 20022, CBPR+, SEPA, Cash Management, Liquidity, Securities & Derivatives Settlements, Reconciliation, Multi-Asset OTC Instruments, In-House Banking

Data & Observability: SQL, NoSQL, Elasticsearch, OpenSearch, Kibana, Grafana, root cause analysis

EXPERIENCE

ION Group

Aug 2021 – Present

Senior QA Engineer / SDET — Wallstreet Suite (Treasury Management System)

- Owned backend and integration quality for Wallstreet Suite, used by the world's largest enterprises and central banks managing nearly \$5 trillion in cash and reserves globally, covering payments, cash management, liquidity, FX and interest rate risk, settlements, trade confirmation, reconciliation, hedge accounting, and regulatory compliance under SWIFT MT/MX, ISO 20022, CBPR+, and SEPA.
- Owned end-to-end test strategy across backend, API, and integration layers for 20+ cross-functional teams; championed shift-left practices through design reviews, sprint planning, and release ceremonies to enable earlier defect detection.
- Designed and maintained a Python-based automation architecture using Robot Framework with reusable custom keyword libraries for REST APIs, async, and queue-driven workflows; executed on the JVM via Jython for seamless integration with the product's Java-centric backend.
- Implemented UI automation using Playwright and Selenium, covering modern platform workflows and legacy web-based modules, integrated into the core automation framework.
- Built and scaled BDD-driven backend and API automation, integrating execution into CI pipelines, cutting regression cycle time by 30% and enabling fault identification in earlier development stages.
- Maintained test flakiness below 1% across nightly runs through disciplined scenario design and dependency isolation.
- Led resiliency and state-of-health testing by inducing component, service, daemon, and database failures; identified cascading failure scenarios, hardened recovery behavior and startup sequences, reducing component failure rate from 25% to under 2%.
- Established a deep RCA practice isolating regressions from data, configuration, and environment-driven failures, delivering actionable diagnostics to the right team or stakeholder without unnecessary escalation.
- Rebuilt fragmented performance testing into Jenkins-integrated executions with automated data generation; improved test data generation speed by 3 to 5x, cut execution time by 40%, and delivered actionable insights on bottlenecks, memory pressure, DB latency, and lock contention across release cycles, enabling self-service runs across teams.
- Built a React and Node.js test status dashboard integrating Jenkins and Azure Graph API, replacing a manual 20-minute per environment EOD process and giving release stakeholders real-time visibility with no human error.
- Extended and owned a configuration comparison tool to detect runtime property drift across distributed environments. Built business-friendly keywords for an Excel-driven low-code framework enabling business teams to validate workflows without writing code.

EDUCATION

Bachelor of Technology in Computer Science

2017 – 2021

Bhagwan Parshuram Institute of Technology, Delhi (Affiliated to Guru Gobind Singh Indraprastha University)
