

Gaurav Dhingra

Senior QA Engineer / SDET | Quality Engineering and Test Infrastructure

grvdhingra1999@gmail.com — +91 9899605005 — Delhi / NCR — GitHub — LinkedIn — Portfolio

SUMMARY

Senior QA Engineer / SDET with ~5 years building quality infrastructure for enterprise-scale distributed platforms. At ION Group, one of three engineers responsible for quality across 100+ distributed components in Wallstreet Suite, a Treasury Management System and Payment Hub serving central banks and global enterprises. Experienced in automation architecture, test infrastructure engineering, distributed systems validation, and AI-assisted workflows for testing and diagnostics at scale.

CORE SKILLS

Languages: Java, Python, JavaScript / TypeScript, SQL, Bash / Shell

Test Automation: Robot Framework, Playwright, Selenium WebDriver, BDD, Pytest, JUnit, TestNG, Pact, Page Object Model, Postman

CI/CD & Tooling: Jenkins, GitHub Actions, GitLab CI, Git, Linux, Shell Scripting, Docker, Kubernetes, AWS, Jira

Backend & API: REST APIs, RestAssured, Kafka, microservices, asynchronous & event-driven systems

Performance & Reliability: JMeter, k6, load testing, resiliency & recovery testing

Data & Observability: SQL, NoSQL, Elasticsearch, OpenSearch, Kibana, Grafana, Root Cause Analysis

AI-Assisted Engineering: Claude, Claude Code, Copilot, LLM-based tooling, generative AI, agentic workflows

EXPERIENCE

ION Group

Aug 2021 – Present

Senior QA Engineer / SDET – Wallstreet Suite (Treasury Management System & Payment Hub)

- One of three engineers accountable for quality infrastructure across 100+ distributed components spanning trading, risk, cash management, settlements, payments, and FX in event-driven systems where correctness failures carried direct financial impact.
- Defined quality strategy and engineering standards across 25+ cross-functional teams, establishing shared practices for test coverage, scenario design, and release readiness while mentoring engineers and shifting quality ownership earlier into the development lifecycle.
- Built a React and Node.js release visibility dashboard integrating Jenkins and Azure Graph API, replacing a manual 20-minute per-environment reporting process with real-time operational visibility for engineering and business stakeholders.
- Rebuilt performance testing into a reproducible Jenkins-integrated platform, reducing execution time by 40% and improving test-data generation speed by over 3x while delivering actionable insights into JVM behavior, memory pressure, database latency, and concurrency bottlenecks.
- Architected a Robot Framework ecosystem supporting 950+ end-to-end scenarios through reusable libraries, extensible abstractions, and AI-assisted workflows for test generation and edge-case discovery.
- Led UI automation for the reimplemented platform using Playwright, designing reusable validation architecture across dashboards and critical workflows while maintaining parallel validation alongside the Selenium legacy suite with no coverage gaps during migration.
- Owned CI-integrated backend and API validation infrastructure enabling regression feedback within hours of code changes and reducing release regression cycles by 30%.
- Drove nightly flakiness below 1% through systematic root-cause investigation and built an LLM-assisted RCA agent that cut issue resolution from days to hours.
- Led resiliency engineering by inducing controlled failures across services, daemons, databases, and distributed components, identifying cascading failure scenarios and reducing non-deterministic failure rates from 25% to under 2%.
- Built a low-code test authoring framework enabling non-engineering stakeholders to independently validate workflows and expand meaningful coverage beyond the QA team.

EDUCATION

Bachelor of Technology in Computer Science

2017 – 2021

Bhagwan Parshuram Institute of Technology, Delhi (Affiliated to Guru Gobind Singh Indraprastha University)
